

Pre-Algebra
Linear Function
Example 2

Identify if the equation will produce a horizontal or vertical line, then graph the function:

1. $x = 4$

VERTICAL

2. $y = 2$

HORIZONTAL

Identify the slope in the following equations:

1. $y = 5x - 6$

$m = 5$

2. $y = 4 - x$

$m = -1$

3. $3y - 9x = 18$

$$\begin{array}{r} +9x \quad +9x \\ \hline 3y = 9x + 18 \\ \frac{3y}{3} = \frac{9x}{3} + \frac{18}{3} \\ y = 3x + 6 \end{array}$$

$m = 3$

Find the intercepts for the following and graph:

1. $y = 4 - 4x$

$x\text{-int: } y = 0$

$$\begin{array}{r} 0 = 4 - 4x \\ +4x \quad +4x \\ \hline 4x = 4 \end{array}$$

$x = 1$

$\therefore x\text{-int}(1, 0)$

$y\text{-int: } x = 0$

$y = 4 - 4(0)$

$y = 4$

$\therefore y\text{-int}(0, 4)$

2. $y = x + 1$

$x\text{-int: } y = 0$

$$\begin{array}{r} 0 = x + 1 \\ -1 \quad -1 \\ \hline -1 = x \end{array}$$

$\therefore x\text{-int}(-1, 0)$

$y\text{-int: } x = 0$

$y = 0 + 1$

$y = 1$

$\therefore y\text{-int}(0, 1)$

3. $3y - 3x = 6$

$x\text{-int: } y = 0$

$3(0) - 3x = 6$

$$\begin{array}{r} -3x = 6 \\ \frac{-3x}{-3} = \frac{6}{-3} \end{array}$$

$x = -2$

$\therefore x\text{-int}(-2, 0)$

$y\text{-int: } x = 0$

$3y - 3(0) = 6$

$$\begin{array}{r} 3y = 6 \\ \frac{3y}{3} = \frac{6}{3} \end{array}$$

$y = 2$

$\therefore y\text{-int}(0, 2)$

Write the following equations in slope-intercept form and graph using the slope and intercept:

$$\begin{array}{rcl}
 1. & 20y - 40x = 100 & \\
 & +40x & +40x \\
 \hline
 & 20y = 40x + 100 & \\
 & \frac{20y}{20} = \frac{40x}{20} + \frac{100}{20} & \\
 & y = 2x + 5 &
 \end{array}$$

$$m = 2$$

$$\text{Int.} = (0, 5)$$

$$\begin{array}{rcl}
 2. & 9y + 27x = 36 & \\
 & -27x & -27x \\
 \hline
 & 9y = 36 - 27x & \\
 & \frac{9y}{9} = \frac{36}{9} - \frac{27x}{9} & \\
 & y = 4 - 3x &
 \end{array}$$

$$m = -3$$

$$\text{Int.} = (0, 4)$$
