

Pre-Algebra
Square Roots and Right Triangles
Example 2

Use the Pythagorean Theorem to find the missing side of the following right triangles:

$$\begin{aligned} a^2 + b^2 &= c^2 \\ 9^2 + 12^2 &= c^2 \\ 81 + 144 &= c^2 \\ \sqrt{225} &= \sqrt{c^2} \\ \underline{\underline{15 = c}} \end{aligned}$$

$$\begin{aligned} a^2 + b^2 &= c^2 \\ 5^2 + b^2 &= 13^2 \\ 25 + b^2 &= 169 \\ -25 \quad -25 & \\ \hline \sqrt{b^2} &= \sqrt{144} \\ \underline{\underline{b = 12}} \end{aligned}$$

$$\begin{aligned} a^2 + b^2 &= c^2 \\ a^2 + 36^2 &= 39^2 \\ -36^2 \quad -36^2 & \\ \hline \sqrt{a^2} &= \sqrt{39^2 - 36^2} \\ a &= \sqrt{39^2 - 36^2} \\ &= \sqrt{225} \\ \underline{\underline{a = 15}} \end{aligned}$$

Use what you know about the Pythagorean Theorem to find the distances between two points given:

1. $(0, 0)$ and $(2, 2)$

$$\begin{aligned} d^2 &= \Delta x^2 + \Delta y^2 \\ d^2 &= 2^2 + 2^2 \\ d &= \sqrt{2^2 + 2^2} \\ &= \sqrt{4 + 4} \\ &= \sqrt{8} \\ &= \sqrt{2 \cdot 4} \\ &= \sqrt{2 \cdot 2^2} \\ \underline{\underline{d = 2\sqrt{2}}} \end{aligned}$$

2. $(2, -4)$ and $(-3, 3)$

$$\begin{aligned} \Delta y &= 4 + 3 = 7 \\ \Delta x &= 2 + 3 = 5 \end{aligned}$$

$$\begin{aligned} d^2 &= \Delta x^2 + \Delta y^2 \\ d^2 &= 5^2 + 7^2 \\ d^2 &= 25 + 49 \\ d^2 &= 74 \\ d &= \sqrt{74} \\ &= \sqrt{2 \cdot 37} \\ \underline{\underline{d = \sqrt{74}}} \end{aligned}$$

Use a trig function to find the missing side of the right triangle:

KNOW: OPP

NEED: HYP

\therefore USE SIN

$$\sin \theta = \frac{\text{OPP}}{\text{HYP}}$$

$$x \cdot \sin 20^\circ = \frac{10}{x} \cdot x$$

$$\frac{x \sin 20^\circ}{\sin 20^\circ} = \frac{10}{\sin 20^\circ}$$

$$x = \frac{10}{\sin 20^\circ}$$

$$\underline{\underline{x = 29.2}}$$

KNOW: ADJ.

NEED: HYP.

\therefore USE COS

$$\cos \theta = \frac{\text{ADJ}}{\text{HYP}}$$

$$\cos 40^\circ = \frac{10}{x}$$

$$\therefore x = \frac{10}{\cos 40^\circ}$$

$$\underline{\underline{x = 13.1}}$$

KNOW: OPP

NEED: ADJ.

\therefore USE TAN

$$\tan \theta = \frac{\text{OPP}}{\text{ADJ}}$$

$$10 \cdot \tan 65^\circ = \frac{x}{10} \cdot 10$$

$$10 \tan 65^\circ = x$$

$$\underline{\underline{x = 21.4}}$$
